Verifa.sk

Due Diligence reports from Slovak state registries

Verifa.sk User Manual

Version 1.0 — July 2026

Table of Contents

1. About Verifa.sk

Verifa.sk is a B2B SaaS platform that automates the preparation of comprehensive Due Diligence reports. It merges extracts from Slovak state registries into a single professional PDF document with an analytical cover page, financial assessment, and color-coded finding semaphores.

The platform is designed for lawyers, auditors, banking analysts, and compliance teams who need fast and reliable verification of business partners, clients, or investment targets.

2. Document Structure

A generated Verifa report consists of the following sections:

- Cover page — subject of verification, Verifa score, risk category, source list with semaphores and page links
- Summary — algorithmic score, forensic auditor correction, final forensic score, 5-pillar breakdown
- Forensic assessment — executive summary, key risks, findings and evidence from registries
- Balance Sheet — asset and liability structure with chart and key ratios
- P&L; Statement — revenue, margins, profit with chart and profitability ratios
- Cash Flow — operating, investing, and financing CF with chart
- Altman Z''-Score — table and chart of financial health trend
- Financial assessment — analytical evaluation, auditor opinion, forensic red flags, footnotes
- Registry extracts — PDF appendices from ORSR, ZRSR, Commercial Bulletin, executions, insolvency, RPVS, health insurers

3. Benefits for the User

Verifa.sk saves time and reduces the risk of missing critical information:

- Speed — report generated in minutes instead of hours of manual research
- Comprehensiveness — 8+ state registries in one document with automatic cross-verification
- Objectivity — algorithmic scoring based on public data, not subjective opinion
- Audit trail — every finding has a source and link to the original PDF extract
- Financial analysis — automatic calculation of 20+ ratios (ROE, ROA, EBITDA, Altman Z-Score, liquidity, leverage)
- Forensic AI — LLM analysis of annual reports, footnotes, and commercial bulletin for risk identification
- Team — share reports within teams, report history, notifications

4. What the Application Can Reveal

Verifa.sk automatically detects and classifies the following findings:

- Active executions — from the Central Register of Executions (CRE)
- Insolvency and bankruptcy — from the Register of Insolvencies
- State debts — social insurance, health insurers (VšZP, Union, Dôvera)
- Commercial register changes — from the Commercial Bulletin (changes in statutory bodies, business objects, address)
- Inability to meet obligations — Altman Z''-Score < 1.1 (distress zone)
- Going concern doubts — from auditor opinion or annual report
- Forensic red flags — related party transactions, off-balance sheet liabilities, contingent risks
- Negative audit opinion — qualifications, adverse opinion, going concern
- Profitability decline — YoY comparison of revenue, margins, and profit
- Liquidity deterioration — Current Ratio, Quick Ratio, Cash Ratio below industry average
- High leverage — D/E Ratio, long-term liabilities above average
- Management changes — from annual report (management turnover as risk signal)

5. Sources and Registries

Verifa.sk draws data from the following public sources:

Source	Content	Status
ORSR	Commercial Register SR — companies, statutory bodies, business objects	Free
ZRSR	Trade Register — sole traders	Free
Commercial Bulletin	Register changes, liquidation, dissolution	Free
Insolvency Register	Insolvency, bankruptcy, restructuring	Free
CRE	Central Register of Executions	Paid (5 credits)
RPVS	Register of Public Sector Partners	Free
RÚZ	Balance sheets, P&L;, cash flow statements	Free
SP / ZP	Social and health insurance — debtors	Free

6. Verifa Score — Methodology

The Verifa score is an automated rating calculated using an internal model based on publicly available data. The score consists of 5 pillars:

Pillar	Weight	Description
Payment capacity	30%	Executions, state debts, insolvency
Financial health	25%	Altman Z-Score, liquidity, leverage
Profitability	20%	ROE, ROA, net margin, EBITDA
Growth	15%	YoY change in revenue, assets, profit
Legal integrity	10%	Bulletin events, management changes, litigation

The final score may be adjusted by the forensic auditor by ±10 points based on forensic judgment, or -30 points if active executions or chronic state debts are found in the PDF extracts.

Risk categories: AAA (90-100, very low risk), A (70-89, low), B (40-69, medium), C (0-39, high).

7. Glossary of Terms

Terminology used in Verifa reports, sorted alphabetically:

7. Glossary of Terms

Terminology used in Verifa reports, sorted alphabetically:

Altman Z''-Score

A predictive model of corporate financial health developed by Edward Altman. Verifa uses the modified Z'' version for non-US firms. Z'' > 2.6 = safe zone, 1.1–2.6 = grey zone, < 1.1 = distress zone. Higher scores indicate lower probability of bankruptcy.

Cash Ratio

Ratio of cash and cash equivalents to current liabilities. The strictest liquidity measure — shows whether a firm can pay all short-term obligations immediately from cash. Value > 0.5 is considered good.

Current Ratio

Ratio of current assets to current liabilities. Shows the firm's ability to pay short-term obligations from current assets. Value > 1.5 is considered healthy, < 1 signals liquidity problems.

D/E Ratio (Debt-to-Equity)

Ratio of total liabilities to equity. Measures the degree of leverage. High values indicate high risk — the firm depends on external capital. Average varies by industry, but > 2 is generally considered risky.

DSO (Days Sales Outstanding)

Average number of days the firm needs to collect receivables from customers. Lower = faster collection = better liquidity. DSO > 90 days may signal customer payment problems.

DPO (Days Payable Outstanding)

Average number of days the firm takes to pay its suppliers. Higher = the firm holds cash longer, but may damage supplier relationships.

EBITDA

Earnings Before Interest, Taxes, Depreciation, and Amortization. Measures operating performance without the influence of financing and accounting decisions.

Equity

The portion of the firm's assets that belongs to owners. Equals total assets minus total liabilities. Positive equity is a basic requirement for going concern.

Forensic Red Flags

Warning signs identified by AI analysis that may indicate fraud, manipulation, or hidden risks. Examples: related party transactions, off-balance sheet liabilities, sudden changes in accounting policies.

Going Concern

The assumption that a firm will continue operating in the foreseeable future (at least 12 months). If an auditor expresses going concern doubts, it signals a serious risk of business failure.

Insolvency

A state where a firm is unable to meet its due obligations. The Register of Insolvencies records proceedings on insolvency, bankruptcy, and restructuring.

Liquidity

The ability of a firm to convert assets into cash to meet obligations. Measured by Current Ratio, Quick Ratio, and Cash Ratio.

Auditor Opinion

Statement by an independent auditor on the accuracy of financial statements. Types: unqualified (clean), qualified, adverse, disclaimer. Qualifications or adverse opinions are strong negative signals.

Net Profit Margin

Ratio of net profit to revenue. Shows how much of every euro of revenue remains after all costs and taxes. Value > 5% is healthy, < 0% means a loss.

Operating Cash Flow

Cash flows from a firm's core operations. Positive OCF means the firm generates cash from operations. Negative OCF is a serious signal — the firm is burning cash.

Quick Ratio

Ratio of current assets excluding inventory to current liabilities. A stricter liquidity measure than Current Ratio, because inventory is less liquid. Value > 1 is considered good.

ROA (Return on Assets)

Ratio of net profit to total assets. Shows how efficiently a firm uses its assets to generate profit. Value > 5% is healthy.

ROE (Return on Equity)

Ratio of net profit to equity. Shows how much profit a firm generates for its owners per euro invested. Value > 10% is considered good.

Verifa Score

A composite rating from 0 to 100, based on 5 pillars: payment capacity (30%), financial health (25%), profitability (20%), growth (15%), legal integrity (10%). May be adjusted by the forensic auditor.

Working Capital

The difference between current assets and current liabilities. Positive working capital means the firm has sufficient short-term resources to cover short-term obligations.

YoY (Year-over-Year)

Year-on-year comparison — percentage change in a value between the same period in two consecutive years. Used to measure growth in revenue, profit, assets, etc.
